Sequencing vector: plasmid; 418
Chemistry: Dye-primer ET; 478 of reads
Chemistry: Dye-terminator Hig Dye; 538 of
Assembly program: Phrap; version 0.990319
Consensus quality: bases at least 030
Consensus quality: bases at least 030
Consensus quality: bases at least 030 Quality coverage: 6.64 in Q20 bases; agarose-fp Quality coverage: 6.38 in Q20 bases; sum-of-contigs Web site:http://genome.wustl.edu/gsc/index.shtml NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The sequence represents a human caspase recruitment domain 12 (CARD-12) CC polypeptide. CARD domains are found in a number of proteins that transmit CC signals that activate apoptosis and inflammatory pathways in response to CC stress and other stimuli. Therefore, CARD-12 and its corresponding CC nucleic acid may be used in treatment and diagnosis of patients suffering CC decrease) of apoptotic cell death or abnormal level (an increase or a CC decrease) of apoptotic cell death or abnormal activity of stress-related CC pathways. The disorders include cancer, viral infections (e.g. caused by CC poxviruses, adenoviruses), autoimmune disorders (e.g. systemic lupus CC erythematosis, arthritis), neurological disorders (e.g. systemic lupus CC disease, amyotrophic lateral sclerosis), haematologic diseases (e.g. aplastic anaemia, myoccardial infarction, stroke), inflammatory and immune system disorders (e.g. Crohn's disease, insulin-dependent diabetes, contact dermatitis, psoriasis, graft rejection, bacterial infections (e.g. tuberculosis, psoriasis, graft rejection), bacterial infections CC (e.g. tuberculosis, lepromatous leprosy), ischaemic and hypoxic brain CC injury, kidney ischaemia/reperfusion injury, excitotoxic brain damage, acute bacterial meningitis and liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
